

Available at ATC: The Innovation Studio

The Innovation Studio is an academic technology incubator – a place for us to introduce tools that may require extra support or maintenance. As these tools become more mainstream, we plan to move them out of the Innovation Studio and into the ATC at large.

Then we'll bring new tools in, and learn some more.

Currently in the Innovation Studio:

- **3D Printing**
 - Formlabs Form2
 - Stratasys Mojo
- **3D Scanning**
 - Einscan-S
 - Structure Scanner for iPad
- **Glowforge laser cutter**
- **RealFiction Dreamoc HD3 hologram projector**
- **NAO from Softbanks Robotics**
